The New iRobot® Scooba® 230 Floor Washing Robot. Advanced Floor Cleaning Technology in a Compact Package

The iRobot Scooba® 230 Floor Washing Robot packs extensive robotic and cleaning technology into a sleek, compact package to quickly and easily wash the floors in your kitchen, bathroom and any sealed hardwood floors.

CLEANING

Using a rigorous three-stage cleaning system, Scooba 230 washes, scrubs, then squeegee-vacuums your tile, linoleum or sealed hardwood floors for you, a sequence that neutralizes up to 97% of common household bacteria.* And Scooba, unlike a mop and bucket, only uses clean water or solution to wash your floors.

COVERAGE

With iAdapt™ Responsive Cleaning Technology, Scooba adapts to your home, making 60 decisions every second and reacting with dozens of cleaning behaviours to cover every section of your room multiple time, and up to 14sq m (150 sq ft) per charge. And at just 3.5 inches (9.2 cm) tall and 6.5 inches (16.5 cm) in diameter, Scooba can clean where dirt and grime hide, including around the toilet and under furniture.

COMPACT

Scooba's advanced water management system uses an active-reservoir design to keep the cleaning solution and dirty water separate inside the robot, while minimizing the product's overall size. While the robot is cleaning, the reservoir shrinks in size as cleaning solution is put down, freeing up space in the robot to hold the dirty water that is being picked up.

EASY TO USE

All you need to do is sweep the floor, fill the reservoir, and press the "Clean" button and Scooba is off and running on either of its two cleaning cycles. Choose 'full' for larger rooms or when extra cleaning time is needed or 'short' for a quick clean-up in small areas. Maintenance is simple too, with a removable bottom plate that easily snaps on and off so rinsing the brushes and squeegee is faster. Scooba 230's compact size not only makes it nimble, but also easy to carry, recharge and store.

* When used as directed, laboratory testing results indicate removal of Escherichia coli and Staphylococcus aureus bacteria after two passes of the Scooba floor washing robot. Individual results may vary.
