

JVC Headphones | HA-S660

The new JVC HA-S660 is a lightweight, foldable around-the-ear headphone that offers superior bass reproduction and soft memory foam ear pads that provide excellent isolation from background noise. To provide the best possible sound clarity and deep bass reproduction, the HA-S660 employs a bass-boosting port and a carbon compound diaphragm.

This design structure ensures that sound pressure in the headphone housing is equalized, which results in superior performance. Performance is further enhanced through the use of a 1.57-inch (40mm) neodymium driver unit. The HA-S660's around-the-ear design helps to block out background noise while also providing a comfortable fit thanks to the sound-insulating soft memory foam ear pads.

With its foldable design, the HA-S660 is easy to pack, while remaining lightweight and comfortable during extended use. Four color variations are available. A 3.94-foot (1.2m) cord with...
